

DNESTREANSCHII MAXIM

SOFTWARE ENGINEER | STUDENT AT SDU

Sønderborg, Denmark | dnestreanschiimaxim780@gmail.com | +45 71422842

SUMMARY

Software Engineering student at the University of Southern Denmark, working part-time at 2ai in Sønderborg since April 2026. I build AI systems that go into production and stay there: agents with real tools and MCP integrations, data pipelines, and the web and backend services around them. In June my team was a finalist at the Council of Europe Democracy Hackathon in Strasbourg.

EDUCATION

BACHELOR OF SCIENCE IN SOFTWARE ENGINEERING, SDU

Sep 2025 – May 2028

PROFESSIONAL EXPERIENCE

Software Engineer (Part-time)

2ai | April 2026 – Present

- Build features across the web platform and the services behind it: Next.js dashboards, NestJS microservices, Docker deployments on Coolify and Vercel.
- Design the tooling our agents use in production. Which tools exist, what goes in a skill, and the evaluation runs that catch a bad answer before a customer sees it.
- Own the company data discovery service that fills customer records from public sources.
- Run the deployments for the services I own, including containers, secrets, health checks and error reporting.

Backend Developer (Intern)

AI Fustion StartUp | June 2024 - Nov 2024

- Wrote and maintained backend services in C# and ASP.NET, including the API endpoints and the data access layer under them.
- Designed database schemas in MSSQL and wrote the queries against them, using Entity Framework for persistence and for the migrations that came with each schema change.
- Worked in an agile team and learned how a change gets from code review to a server.

PROJECTS

AgnoSpeech, Council of Europe Democracy Hackathon

Strasbourg, June 2026

Finalist, one of four teams recognised out of 20. AgnoSpeech takes the identity out of hate speech records so a helpline or a researcher can share the data without exposing the people in it. It runs on a laptop CPU and nothing leaves the machine. I owned the backend pipeline and the deployed workbench.

Tom, an AI colleague with a physical body

An internal agent with a written identity and a memory kept in a git repository. The same Tom answers in chat, in a dashboard, and out of a small desk robot. I worked on its deployment and remote access.

Lead generation engine

A tool a non-technical operator runs to research companies, find the right contact and file the result in a CRM, with a spending limit on the paid APIs it calls.

SKILLS

- **AI Engineering:** LLM agents, MCP servers, agent skills, tool design, evaluation harnesses
- **Frontend:** Next.js, React, TypeScript, Tailwind CSS
- **Backend:** Node.js, NestJS, Python, C#, ASP.NET, REST APIs, background jobs
- **Databases:** PostgreSQL, Supabase, Prisma, MSSQL, T-SQL, Entity Framework
- **Tools & Platforms:** Docker, Vercel, Coolify, GitHub Actions, Git, Linux Administration
- **Languages:** English (C1, IELTS 8.0), Russian (native), Romanian (native)
- **Certifications:** Certiport IT Specialist (Device Configuration, Databases, Python, 2024)
