# DNESTREANSCHII MAXIM

SOFTWARE ENGINEER | AI PRODUCTS | STUDENT AT SDU

Sønderborg, Denmark | dnestreanschiimaxim780@gmail.com | +45 71422842 | github.com/MaxDnes

**All my projects and hackathons → maxdnes.is-a.dev**

## SUMMARY

Software engineering student at SDU, working part-time at 2ai, a Danish startup that automates marketing for small businesses. I build AI features and keep them running in production, from the model calls to the UI and the deployment. Finalist at the Council of Europe Democracy Hackathon, Strasbourg 2026.

## PROFESSIONAL EXPERIENCE

**Software Engineer (Part-time)** — **2ai, Sønderborg | April 2026 – Present**

- Developed an AI landing page generator that turns proven web pages into reusable templates and builds on-brand client pages from a short brief.
- Developed a data discovery service that finds and cross-references Danish companies across the CVR registry, web search and social media, with LLM verification.
- Developed a service that works directly with the Meta Marketing API to sync clients' campaigns, ads and insights.
- Optimized the production of ad creatives using brand-aware templates and automated rendering.
- Developed agentic AI workflows in CI pipelines for automated code review and issue handling, and built MCP tools for our internal agents.
- Built full-stack features in the Next.js admin platform and deployed services with Docker on Coolify and Vercel.

**Backend Developer (Intern)** — **AIFustion StartUp | June 2024 – Nov 2024**

- Backend services and REST APIs in C# / ASP.NET, with MSSQL schemas and Entity Framework migrations, in an agile team.

**System Administrator** — **Public school, 1500+ students | Sept 2022 – May 2025**

- Set up and maintained the school's computers and network, and supported 80+ teachers with hardware and software.

## PROJECTS

**more at maxdnes.is-a.dev ↗**

**AgnoSpeech, Council of Europe Democracy Hackathon** — **Strasbourg, June 2026**

Finalist, top 4 of 20 teams from 16 countries. Strips author identity from hate speech data so it can be shared safely, then attacks its own output to measure what leaked. Runs fully offline on a laptop CPU. I owned the backend pipeline and the deployed app.

**Tom, AI colleague with a physical body** — **2ai**

Internal AI teammate that lives in Teams, our dashboard and a desk robot, with one shared memory. I handled its deployment and the robot's remote connection over 4G.

**maxdnes.is-a.dev, a desktop OS in the browser** — **Personal**

A NeXTSTEP-style workspace with its own window manager, column file browser, dock and a soundtrack sequenced live in Web Audio. No framework, no build step, three files.

## EDUCATION

**BSc Software Engineering, University of Southern Denmark** — **Sep 2025 – May 2028**

## SKILLS

- **AI Engineering:** LLM agents, MCP servers, tool design, evaluation and benchmarks, LLM cost tracking
- **Frontend:** Next.js, React, TypeScript, Tailwind CSS
- **Backend:** Node.js, NestJS, Python, C#, ASP.NET, REST APIs, background jobs
- **Data & Infra:** PostgreSQL, Supabase, Prisma, MSSQL, Docker, Vercel, Coolify, GitHub Actions, Linux
- **Languages:** English (C1, IELTS 8.0), Russian (native), Romanian (native)
- **Certifications:** Certiport IT Specialist in Python, Databases and Device Configuration (2024)
